## Enghouse Releases NetWORKS 4.4 on ArcGIS 9.2

Markham, Ontario, Canada, March 17, 2008 - The Asset Management Division of Enghouse Systems Limited (TSX:ESL) is pleased to announce the release of **NetWORKS 4.4**. The **NetWORKS** product suite continues to meet the outside plant and inside plant network design and management requirements of utility telecoms, municipal telecoms, independent telecoms and cable TV companies.

The **NetWORKS 4.4** release includes enhancements to the CopperWORKS module, productivity tools bug fixes and is the first version to support the French language and the Vista operating system on the ArcGIS 9.2 platform.

Key enhancement includes:

- **Pair Posting**
- **Connecting dead pairs**
- **Bi-directional pair ripple**
- **Support for the French language**

**NetWORKS 4.4**, based on ArcGIS 9.2, enables telecommunication companies to document and manage complex, multi-domain networks. **NetWORKS** can help maximize network resources, increase workflow, enhance customer service and improve network reconfiguration. **NetWORKS** provides both Inside Plant (ISP) and Outside Plant (OSP) design, network management and facilities management capabilities within an integrated ArcGIS 9.2 platform. Its open, interoperable and web deployable architecture can interface with existing enterprise applications such as work force management, customer information systems, network monitoring systems and others.

### **About Enghouse Asset Management Division (AMD)**

Enghouse Asset Management Division (AMD), a division of Enghouse Systems Limited (TSX:ESL), is a publicly traded enterprise software company serving a number of distinct vertical markets. The Asset Management Division offers a complete suite of enterprise-enabled Geospatial Network Design and Infrastructure Management solutions. Enghouse's **NetWORKS** product portfolio for telecommunications, cable TV and utilities consists of applications to efficiently and cost effectively design and manage blended fiber-copper-coax-wireless networks.
