Enghouse Releases NetWORKS 4.6 on ArcGIS 9.3

Markham, Ontario, Canada, October, 2008 - The Asset Management Division (AMD) of Enghouse Systems Limited (TSX:ESL) is pleased to announce the release of **NetWORKS 4.6**. The **NetWORKS** product suite continues to meet the outside plant and inside plant network design and management requirements of utility telecoms, municipal telecoms, independent telecoms and cable TV companies.

The **NetWORKS 4.6** release includes enhancements to the EDM and ISP modules, productivity tools and defect resolutions, and is the first version to support the ArcGIS 9.3 platform.

Key enhancements are:

- Windows authentication for the EDM module
- Clipping polygons applied to disconnected editing
- ISP availability in disconnected editing
- Support for ArcGIS 9.3

NetWORKS 4.6, based on ArcGIS 9.3, enables telecommunication companies to document and manage complex, multi-domain networks. **NetWORKS** can help maximize network resources, increase workflow, enhance customer service and improve network reconfiguration. **NetWORKS** provides both inside plant and outside plant design, network management and facilities management capabilities within an integrated ArcGIS 9.3 platform. Its open, interoperable and web deployable architecture can interface with existing enterprise applications such as work force management, customer information systems, network monitoring systems and others.

About Enghouse Asset Management Division

AMD, a division of Enghouse Systems Limited (TSX:ESL), is a publicly traded enterprise software company serving a number of distinct vertical markets. AMD offers a complete suite of enterprise-enabled geospatial network design and infrastructure management solutions. Enghouse's **NetWORKS** product portfolio for telecommunications, cable TV and utilities consists of applications to efficiently and cost effectively design and manage blended fiber, copper, coax and wireless networks.
