Enghouse Releases NetWORKS WEB Enterprise Server 4.4 on ArcServer 9.2

Markham, ON, Canada, March 17, 2008 - The Asset Management Division of Enghouse Systems Limited (TSX:ESL) is pleased to announce the release of **NetWORKS Enterprise Server 4.4**. The **NetWORKS Enterprise Server 4.4** product portfolio continues to meet the web based requirements of the utility telecoms, municipal telecoms, independent telecoms and cable TV companies.

NetWORKS Enterprise Server 4.4 is the first web based product utilizing the features and benefits of ESRI's ArcServer 9.2. **NetWORKS Enterprise Server 4.4** is a secure internet based application for viewing and analyzing an enterprise geodatabase. **NetWORKS Enterprise Server 4.4** includes standard mapping and viewing functionality as well as network domain specific query and reporting tools.

Key functionality includes:

- **Fiber Service Report**
- **Fiber Splice Diagram**
- **Fiber Trace**

NetWORKS enhances the value of ESRI's ArcGIS platform by addressing the network design and asset management needs of the telecommunications industry. Enghouse continues to extend **NetWORKS** ensuring its lead as the product of choice for Utility, Municipal and Independent Telecoms.

About Enghouse Asset Management Division (AMD)

Enghouse Asset Management Division (AMD), a division of Enghouse Systems Limited (TSX:ESL), is a publicly traded enterprise software company serving a number of distinct vertical markets. The Asset Management Division offers a complete suite of enterprise-enabled Geospatial Network Design and Infrastructure Management solutions. Enghouse's **NetWORKS** product portfolio for Telecommunications, Cable TV and utilities consists of applications to efficiently and cost effectively design and manage blended fiber-copper-coax-wireless networks.
