Product Announcement

December, 2007

Enghouse Releases NetWORKS 4.3.2 on ArcGIS 9.2

Markham, Ontario, Canada, Dec, 2007 - The Asset Management Division of Enghouse Systems Limited is pleased to announce the release of **NetWORKS** 4.3.2. The **NetWORKS** product suite continues to meet the outside plant (OSP) and inside plant (ISP) network design and management requirements of utility telecoms, municipal telecoms, independent telecoms and cable TV companies.

The **NetWORKS** 4.3.2 release includes a new licensable module, productivity tools and bug fixes for all **NetWORKS** modules. **NetWORKS** 4.3.2 provides support for ESRI's ArcGIS 9.2 sp 4.

Key enhancement includes:

- **Query Designer**
- **Geoprocessing Toolbox**
- **Paircount ripple and posting**

NetWORKS 4.3.2 based on ArcGIS 9.2 enables telecommunication companies to document and manage complex, multi-domain networks. **NetWORKS** can help maximize network resources, increase workflow, enhance customer service and improve network reconfiguration. **NetWORKS** provides both ISP and OSP design, network management, and facilities management capabilities within an integrated ArcGIS 9.2 platform. Its open, interoperable and web deployable architecture can interface with existing enterprise applications such as workforce management, customer information systems, network monitoring systems, and others.

About Enghouse Asset Management Division (AMD)

Enghouse Asset Management Division is a division of Enghouse Systems Limited (TSX:ESL), a publicly traded enterprise software company that serves a number of distinct vertical markets. AMD offers a complete suite of enterprise-enabled Geospatial Network Design and Infrastructure Management solutions. Enghouse's **NetWORKS** product portfolio for telecommunications, cable TV, and utilities consist of applications to efficiently and cost effectively design and manage blended fiber-copper-coax-wireless networks.
