Product Announcement

Enghouse Releases NetWORKS 5.0 on ArcGIS 9.3.1 sp 2

Markham, Ontario, Canada, June, 2011 - The Asset Management Division (AMD) of Enghouse Systems Limited (TSX:ESL) is pleased to announce the release of **NetWORKS 5.0**. The **NetWORKS** product suite continues to meet the outside plant and inside plant network design and management requirements of Telecommunications operators including utility telecoms, municipal telecoms, independent telecoms and cable TV companies.

The **NetWORKS 5.0** release introduces core enhancements that significantly improve usability, as well as API performance. It also enables flow-through provisioning for large volume transactions.

NetWORKS 5.0 enables telecommunication operators to document and manage complex, multi-domain networks. **NetWORKS** allows you to maximize your network resources, optimize workflow, enhance customer service and significantly reduce service activation failures. **NetWORKS** provides both Inside Plant (ISP) and Outside Plant (OSP) design, network and facilities management capabilities within an integrated ArcGIS 9.3.1 platform. Its open, inter-operable and web-deployable architecture can interface with existing enterprise (OSS/BSS) applications such as customer information systems, work force management systems and network monitoring systems.

About Enghouse Asset Management Division (AMD)

AMD, a division of Enghouse Systems Limited (TSX:ESL), is a publicly traded enterprise software company serving a number of distinct vertical markets. AMD offers a complete suite of enterprise-enabled geospatial network design and infrastructure management solutions. Enghouse's **NetWORKS** product portfolio for telecommunications, cable TV and utilities consists of applications to efficiently and cost effectively design and manage blended fiber-copper-coax-wireless networks.
